

Ordered BB84 · commissioning diagnostic
1,854 selected photons · gate 50–60 ns · trial alignment UNVERIFIED

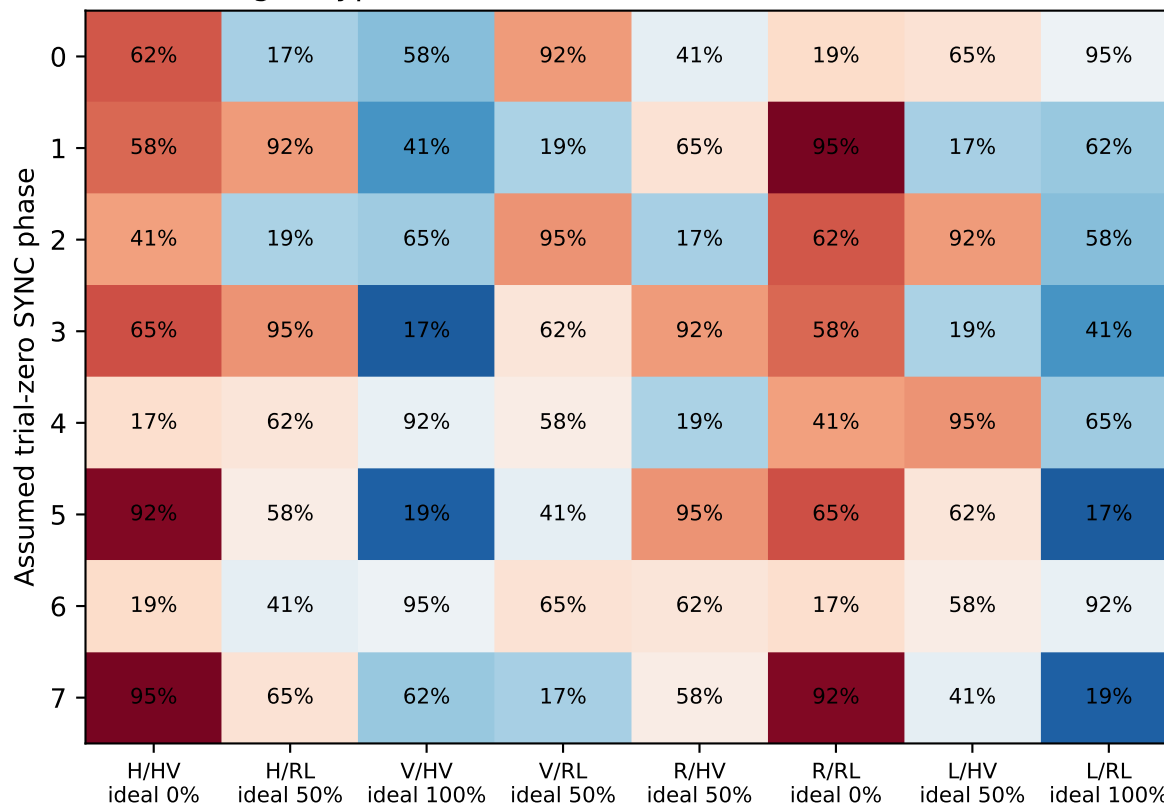

Arrival distribution · selected SYNC interval

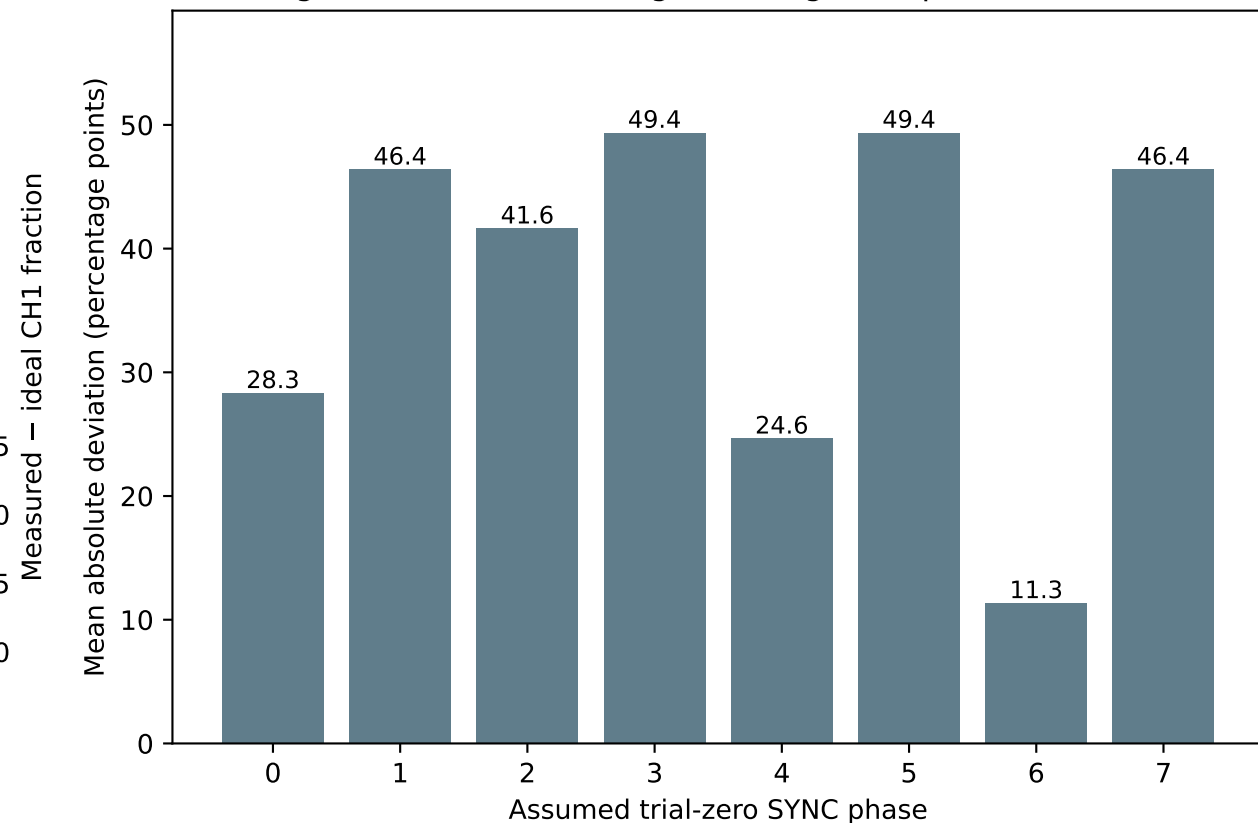

Observed eight-cycle pattern · pointwise 95% intervals

All eight hypotheses · numbers = measured CH1 fraction

Agreement across all eight settings · no phase selected

Assumed CH1 outcomes: HV→V, RL→L. Physical labels provisional. No background/efficiency correction.
Phase agreement does not prove trial origin, missing-pulse integrity, QBER, or secure-key performance.
