Detected rate (counts/s)

Conditional detection probability

Input state / Alice EOM target

S_0
Alice -165 V

S_2
Alice +43 V

S_1
Alice -61 V

S_3
Alice +147 V

S_0 · HV/CH2
Bob +30 V

S_2 · HV/CH1
Bob +30 V

S_1 · RL/CH2
Bob -68 V

S_3 · RL/CH1
Bob -68 V

Output channel / Bob EOM target

S_0
Alice -165 V

S_2
Alice +43 V

S_1
Alice -61 V

S_3
Alice +147 V

S_0 · HV/CH2
Bob +30 V

S_2 · HV/CH1
Bob +30 V

S_1 · RL/CH2
Bob -68 V

S_3 · RL/CH1
Bob -68 V

Output channel / Bob EOM target

Color identifies output channel; shade and numbers show measured values. Outlines mark expected unity outcomes.

Probabilities are normalized within each Bob basis. No background subtraction or detector-efficiency correction.

EOM targets: Alice/AO0, Bob/AO1. Plot order is saved in analysis.json; raw data and CSV matrix order are unchanged.
